

Creating a bootable Linspire / Freespire USB drive in Windows :

There are several methods available to create a bootable Linspire / Freespire USB drive in Windows; the preferred method is to use Rufus USB, available at <https://rufus.akeo.ie/>

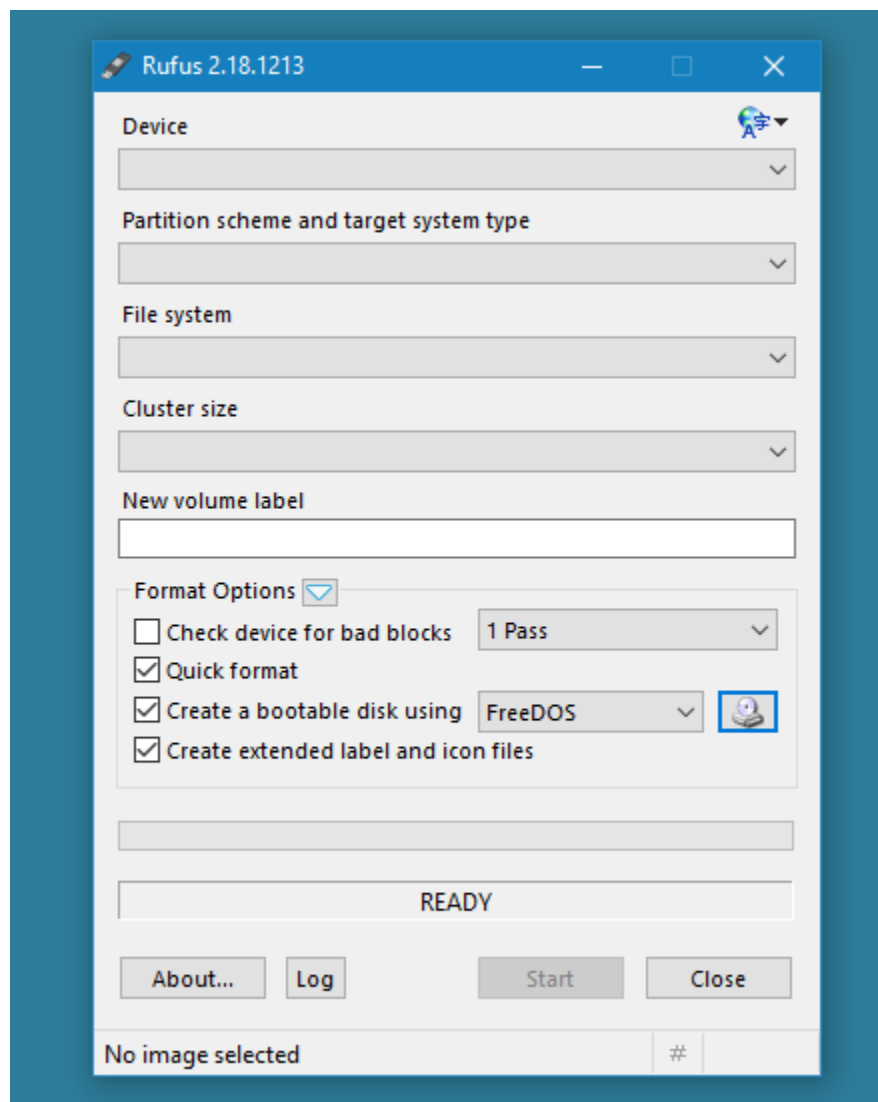

Downloading the executable to your local machine, the user is prompted to run a standard Windows installation. Launching the program and accepting the UAC prompt :

The user is then presented with this screen :

- 1). Device is the USB drive
- 2), 3), 4), and 5) will be supplied during the burning process

This is the time to download the ISO here :

You can download Freespire from our FOSS development labs

[Freespire Info Page](#)

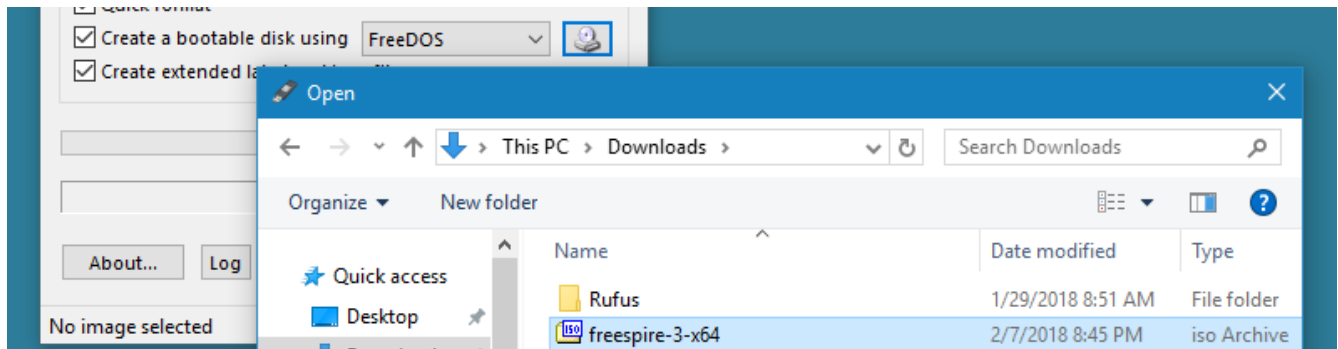

<http://distro.ibiblio.org/blacklab/freespire/freespire-3-x64.iso>

<http://distro.ibiblio.org/blacklab/freespire/freespire-3-x64.iso.md5>

<http://distro.ibiblio.org/blacklab/freespire/freespire-3-x64.iso.sha256>

You can purchase Linspire licenses from our webstore and preloaded on workstations. More information on Linspire is available from the [distribution's page](#).

Selecting the optical drive icon to the right of Create a bootable disk using opens a dialog to browse the local filesystem for an ISO file :

Pressing Start begins the process; booting from the newly created drive ends it. This process can be duplicated for Linspire 7.
